

EJDER YALÇIN will Continue to be the First Choice in the World with Its Armoured Ambulance Version

EJDER YALÇIN continues its progress with different configurations for different missions. Nurool Makina, which has so far delivered five different configurations of EJDER YALÇIN to different users around the world, will be displaying the ambulance version of the vehicle at IDEF 2019. The design of the armoured ambulance has taken into account all the needs of today's battlefield and all of its functions and capabilities have been developed in a way that complies with the standards of military ambulances.

EJDER YALÇIN is ranked first in its class in terms of level of protection, mobility and payload capacity. Among different configurations of the vehicle are: Explosive Disposal Vehicle, Air Defence Vehicle, Command and Control Vehicle, Armoured Combat Vehicle, CBRN Reconnaissance Vehicle, Personnel Carrier Vehicle, Mine / IED Detection – Clearance Vehicle, Ambulance and Border Surveillance & Security Vehicle. Nurool Makina is continuing its work on different configurations of the vehicle, in line with the contracts it has signed with different users around the world.

Engin Aykol, General Manager of Nurool Makina, emphasizes that the different configurations of the vehicle bring an added value to the user: “Our work on such different configurations is the most concrete sign of the maturity of our organizational capacities. Different configurations increase the value of a vehicle family to meet different needs of the user on a single platform, and they bring a great benefit to users. Some configurations that we developed with this approach now enjoy a very important position in the world. In the upcoming period, we will continue to deliver to our different users platforms that perform their tasks in the best way”.

About Nurool Makina

Nurool Makina ve Sanayi A.Ş is a defence industry company in operation since 1976 as an affiliate to Nurool Holding. With over 40 years of industrial experience and technological infrastructure, Nurool Makina carries out indigenous system design and production for armoured combat vehicles, armoured personnel carriers, and special purpose platforms in the 4x4 segment. Members of Nurool Makina’s product family include EJDER TOMA, EJDER YALÇIN, EJDER KUNTER, ILGAZ and NMS, which are each leaders of their own class.

Taking life-cycle cost-effectiveness into account, Nurool Makina offers solutions that, beyond the provision of the vehicle, also respond to the operational needs of the user.

With its current and new products, Nurool Makina conducts with increasing momentum its domestic and international operations in the fields of defence and national security.
